

Define Problem Statements

Date	1 July 2026
Team ID	—
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	3 Marks

Create a problem statement to understand the target user's point of view. A well-articulated problem statement keeps the team focused on the real pain points that Rising Waters needs to solve for people living in flood-prone areas.

Customer Problem Statement Template

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A resident of a low-lying, flood-prone locality	decide whether to move belongings / evacuate before heavy rains	official flood warnings are often too generic or arrive too late	there is no simple tool that turns local weather and river readings into a clear flood/no-flood risk	anxious and unprepared
PS-2	A local disaster-management officer	prioritise which villages/wards need early warning resources	manual risk assessment is slow and depends on individual experience	no lightweight, data-driven screening tool exists for quick triage	overwhelmed during monsoon season
PS-3	A farmer near a river basin	protect crops and livestock ahead of a possible flood	traditional forecasts don't combine rainfall, river level and drainage together	flood risk depends on many interacting factors, not rainfall alone	uncertain about when to act
