

Customer Journey Map

Date	1 July 2026
Team ID	—
Project Name	Rising Waters – Flood Prediction System
Maximum Marks	2 Marks

Journey of a resident using Rising Waters to assess flood risk before or during heavy rainfall.

Phase of Journey	Stage 1: Notices Heavy Rain	Stage 2: Checks Risk on the App	Stage 3: Acts on the Result
Actions	• Observes rising river level / continuous rain • Hears community chatter about possible flooding	• Opens the Rising Waters web app • Enters rainfall, river level, humidity and other readings on the Predict page	• Reads the Flood/No-Flood result and probability • Shares the result with family or local officials
Touchpoint	• Physical environment, local news	• Home page → Predict form (predict.html)	• Flood Result / No-Flood Result page
Customer Thought	"Is this normal rain or something more serious?"	"Let me put in today's numbers and see what it says."	"Now I know what to do next."
Customer Feeling	Uneasy, uncertain	Hopeful for clarity, slightly anxious	Relieved if safe, alert and prepared if flood risk is high
Process Ownership	Resident / community	Rising Waters Flask application	Resident, local disaster-management team
Opportunities	• Push local weather awareness content	• Pre-fill sensible default values so entry is fast • Show the model's confidence, not just yes/no	• Add safety checklist on the flood-result page • Allow saving/printing the result for records
